Milestone 1 - Planning Phase

Risk Analysis

Following guidelines on Moodle (Link: <https://csemoodle3.ucsd.edu/mod/page/view.php?id=1321>)

Risk	Description [story]	Severity	Resolution	Status
Database selection and use	We all lack experience with databases. This might hinder us because we'll most likely need to use some sort of database to get this app working.	High	We will assign a subteam that will be working on database-related tasks. This subteam should take some time to learn, and can teach or assist other team members later on.	Resolved
Not meeting enough consistently	Everyone's schedule fluctuates, and some weeks we might not have more than two hours in common.	High	We will meet on weekends (Sunday night) and do our standups before class (9:45-10am). At the end of each big full-team meeting, we'll schedule the next. We'll also meet in smaller groups, as availability allows, for the development phase.	Resolved
Low velocity in full-team meetings	Based on our first few meetings, it seems like we move very slowly when all 6 of us are together.	Med	Pair programming should move faster, and as we become more familiar with each other (or after we have worked out our initial assumptions and disagreements), we should be able to start moving faster, and our frequent meetings should go more smoothly.	Resolved
Lack of Android knowledge	Nobody on our team has worked with Android before (outside of our 110 labs).	Low	We can spend some time this weekend or this week to learn what we need, and also attend Labs, which seem to have been covering enough information to give us a good foundation / starting point.	Resolved

Planning Poker
